David,

Did you have the meeting with Nancy Stoner this week? If so, what resulted?

Thanks!

Tresha

Eric,

I am a chemist is WSD. I have not seen any of the MSDSs supplied by Freedom but I have looked at the Eastman and Dow MSDSs online for Crude MCHM and Dowanol PPh, respectively. Can you share the official MSDSs from Freedom?

I am no expert but will answer your questions the best I can from my knowledge of chemistry or from what I have found online.

David / Eric

I just received a question From Sen Rockefeller's office regarding PPH. They said that they had conflicting information as to whether PPH was Hydrophobic or Hydrophilic. The staffer said that they have seen conflicting information on the Chemical. I am going back to look at the CDC information to see if they describe the materials any differently. Is there someone, maybe Steve OST that could provide definitive chemistry on the components. Is there an issue with PPH stripped - vs the individual components

They also asked if crude MCHM is a surfactant? An Alcohol A long chain polymer? I have not started to research it yet but if you have anyone that can help with these questions it would help us in our response to the Staffers. I have CC'D or Fort Meade lab but haven't had the time to talk to Cindy yet

Thanks
Bill

Becki,

I thought you should see this emerging information from the Elk River Spill. If you could share it with the EPA review team, I would appreciate it.

Thanks,

Chris

MSDSs attached .as discussed Chris. Please give me a call if you have thoughts .note the LD50 and some comments on cancer info.

Thanks again,

Vik

Please see below from EPA R3.

Ed, can Larry and your group review the tox info on this additional chemical for our internal purposes as soon as possible?

We can discuss this at our 4 pm with Robin and determine how to discuss with the state. I am sure at least their environmental state folks are also aware of this now too, and we can expect the health folks to ask our opinion soon is my guess.

Good morning,

During the 10am meeting with Freedom Industries this morning we were told that there was a mixture in Tank 396, instead of just MCHM. The mixture was approximately 5.6% of the PPH which can be found in the attached MSDS sheet from published by Freedom Industries. The PPH is a combination of the two products from DOW which are also attached to this email. Approximately 300 gallons of the PPH with 6251 gallons of MCHM for the total release (including what is still in the soil and what made it to the river).

Thanks,

Melissa Linden
